"Einstein-Wellen-mobil", a mobile exhibition about gravitational waves

Authors: B. Brügmann, K. Kokkotas, H.-P. Nollert

The "Einstein-Wellen-mobil" is a mobile exhibition about gravitational waves. It is part of the outreach project in the Sonderforschungsbereich/Transregio 7 "Gravitational Wave Astronomy". It features interactive experiments, simulations, models, and a series of explanatory movies. It is directed at the general public with a special emphasis on high schools. While the participants of the conference will probably not learn anything about gravitational waves that they don't know already, they may enjoy visiting the exhibition and playing with the exhibits.
